## About This Game

# ABOUT THE GAME

"You are the player, and must chase the Boogie Man.  
If you catch him, you win! And that's the happy ending.  
If you don't catch him, you lose, and what awful bad ending may await you then?"

This is the third title in the Strange Man series, developed by Uri Games.

After Keith takes his wife, Helena, with him on a mandatory holiday at a castle, Helena makes a startling confession.

You play as Keith, a cold detective, sent on a work vacation by his boss. After arriving at the castle him and his wife take a tour of, the Boogie Man appears, and in his wake, murders appear.

As Keith is obsessed with protecting people after his son's death, he chases after the Boogie Man, in hopes to end the murders and the frightful night of "entertainment".

The Steam version features special additions such as achievements and multi-language localization.

Awesome for only \$5! Game is pretty easy to beat, that is... when I'm with my friends. Hopefully they will add new maps or something, to expand on the whole "Paranormal Activity Team" thing. Love that it's multiplayer as well, really makes it quite fun with friends.. I love VR and have been so excited to see it grow, so I've been happy to buy a lot of less polished games for the sake of experiencing something new and supporting new studios doing VR. I was excited to see this because I imagined it as "first party" content. Something polished and worth waiting for.

Wow. No. I was very wrong. This is probably the least polished and least fun game I have played on the vive.

I bought it one of the first days it was out and all the reviews were glowing. "The kind of game that sucks you in" "You will want to play for HOURS." "The sound and visuals are top notch". It sounded perfect.

I would be disappointed by this game if it cost even \$5 because of how unfinished it feels. Free VR games have felt better. I look forward to each level ending to give me relief from having to play these games.

The three games are incredibly simple and, more importantly, not fun. In all of them the physics feels so sloppy and floaty that it's hard to predict how to actually play/move.

Bowshot is fast and chaotic but feels like you're just being assaulted by so many things that it's a race to (your) death. I would pick The Lab's archery game ANY day.

Fracture has just the most insane physics, and to 3-star the levels, you have to destroy EVERY block. That isn't hard in a regular "brick breaker" game, but in this one you're standing in a room with block floating 100ft above you trying to hit a 1ft diameter ball at it. Not at all satisfying. I would guess that maybe I'm awful at this game, but even doing what seems to be terribly I'm in the top 100 global scores so...either no one is playing, or no one is winning.

Smash is a little fun...it's like Holoball but worse. The physics again are weird and floaty, the impact of the balls feels off, the randomness of the powerups is bizarre. And it all takes place in what feels like a futuristic sewer pipe.

That brings me to my next point. The visuals? Garbage. Muddy textures, no shadows, poor reflections, static background. It's really about as poor as I've seen in any VR game. The sound too makes me embarrassed for the creators. The voice of the main AI sounds like an announcer at Chucky Cheeses and they call themselves the "We" which, in that high pitched enthusiastic voice, is impossible to take seriously.

All in all, I have not had any fun in this game, I am disappointed by what they delivered, and I feel failly lied to about what it was. The \$30 price tag is outrageous for this type of game, but I can only hope they use those funds to make something more.... So much fun so glad this is on steam played on other sites but this is the best.. I absolutely adored this game. The art style is unique and lovely, and the gameplay offers a really awesome puzzle-solving experience from start to finish. I was captivated the entire time and only wish that the main story was longer. But fret not, for there is still boatloads of content, especially if you are the type of gamer that loves to explore the environment and look in every nook and cranny to see what there is to see. There are plenty of things to do and tidbits to figure out that have nothing to do with the main story itself, so you can definitely keep busy! You have to be the type of person that enjoys learning and "detective work", though. (I myself filled up like 30 pages of a notebook with information I gathered along the way as it helped me learn how the in-game coding language worked and whatnot!) Every "ah-hah!" and eureka moment I had whenever I discovered something new was a really satisfying feeling. :). This DIC at first may see as "not installed" but try uninstalling and reinstall it works for me. (if not working) At first you would see some costume selections you cannot choose (shady numbers) its because you got the characters because of the

---

dlc you bought. the locked costumes are simply not accessed because its gameplay unlock to gain/unlock the costumes. If you played without the dlc, you would have to unlock by simply playing. The instant unlock of characters became an option because you unlocked by buying the dlc costumes. e.g 1st hokage locked...bought dlc for 1st hokage, naruto simply unlocks.. A fan of the piccross series on the ds and this game reminds me of that. Would recommend it to people who also like the piccross series as well.

This game is amazing, The story is great, the characters are awesome and the combat is very fluid. Plus there is a dragon, I strongly recommend this game.. I didn't enjoyed the writing. The art style wasn't great either, and the characters and a few situations were bad\didn't made much sense. Only get this DLC on a good sale and if you want to read a bit more of Asumi material.

Overall, I don't recommend this graphic novel.. It's okay

10/10  
-IGN

seriously though, it is actually a pretty funny game, and the voice actor for the scai- erm sorry dragon sounds really awesome, I'd recommend picking it up in a sale though if you really want this game, not saying it's bad just not saying it's good either, I'm kind of neutral but lean more towards positive, there really is just not much to say about this game, you fly around as a dragon with a cool voice and kill human beings and pigs occupying villages.. This is a reasonable game with average graphics but a poor control system. Using your head to turn a vehicle is wrong and awkward, painful and difficult. There is a joystick movement (right stick, left to right) that does nothing, yet you can only turn the helicopter by turning or twisting your head. No remapping of controls is allowed either. If they can fix these issues I would recommend it, but until they do I won't play it again. I want to play it again though, but just can't like the controls. May even refund. It's not a AAA title by any means, but for the money it's ok.. The puzzles aren't great, the writing and dialogue aren't great, the minigames are kinda ok but the plot is pure wtf. I recommend this one just for the plot and the game looks kinda nice. Too bad they didn't go as far with all the being inside others head as Psychonauts did (play that game if you haven't already, it's pure gold).. Bootombaa is a game that does not even warrant a review, that is how bad it is. This game is a game that I could have made in elementary school. To think that this is a game that actually costs money to buy on steam... it really blows my mind. Then again, who am I to speak if I bought this game (it was part of a cheap♥♥♥♥♥bundle).

The only reason you should want this game is if you are a game collector like me or an achievement hunter. The game has like 4000 achievements you get just by idling in the main menu, so you get quite a few achievements.

Overall, avoid this game for yourself and send this game to your friends to troll them.

Rating: 0/10 (this isn't even worth giving a rating to as a game)

Recommend Price: \$0.01 (so that you can troll your friends). I was really excited for this game when it released, but it's nowhere worth the pricetag. The gameplay is very shallow and doesn't entertain for more than an hour. Although this game is beautiful and is really neat for anyone that's a fan of the VN or the anime, it's not worth a buy for more than 10 bucks if even that. The description on the Store page is really misleading as it makes the game seem more complex than it is. Online battling isn't very active and the movesets are very simplistic as characters have about 4 normal moves and 2 specials the combos aren't as complex as say a Street Fighter or Tekken Game. Save your money unless this goes on sale for less than \$10. This game isn't worth anymore than that.. I played this with a large group of friends and we all had a blast, so I bought a copy for myself.

There's something about 6+ people squished together to keep one finger on a key button, people are put into random teams based on the color they choose, and everyone is screaming. In the distance: sirens.

You can completely customize how many balls are on the screen and even how big or small the playfield is. Depending on what mode you select changes the mode of gameplay. Very simple gameplay, and even then we played it for well over an hour and only stopped because we had a time restraint.

Had an absolute blast and it had everyone laughing and shouting. 10/10. this thing will hurt you badly.. Now that we are on par with PS4 version of the game i honestly think this is a great game. There are couple mandatory things that still need to be addressed like desync problems, and man the variations i really really hope they listen to the community and make custom variations viable in tournament and ranked. I know they said making an UI for that ain't a problem, there is something else that is the problem but man if they figure it out it's 10/10. During me giving that review that stuff is still not in the game so i'll give it 7/10
